

RONAN TYNAN

AV / TECH RIDER

Podium/Water

Dr. Tynan prefers an adjustable podium/lectern for his program. If an adjustable lectern is not available, a standard lectern can be built up to a hand rest height of 46". Please have a reading light fixture attached to the podium for his notes. The program will be approximately 45 minutes. Also, please have several bottles of room temperature still spring water on or near the podium for both the sound check and program.

Video Introduction

Dr. Tynan's program opens with a brief biography on DVD (approximately 3 minutes) which serves as an excellent introduction. If the sponsor would like to introduce Dr. Tynan, it must be done before the DVD introduction. Dr. Tynan will bring with him the DVD biography, which can also be advanced to the AV team.

Technical Equipment:

- Screen(s) large enough for your audience to see the video
- DVD projector
- Professional AV technician

Sound System/Live Vocals: Microphone I

For his lectures, Dr. Tynan performs two songs. He will bring with him his own Neumann KMS 105 wired hand held microphone which he will use for the singing portion only. Dr. Tynan will bring his backing tracks on a standard format music CD, which can also be advanced to the AV team.

Technical Equipment

- Professional sound console with reverb, delay and phantom feed to support live vocals performed to backing tracks.
- 2 monitors
- Microphone stand
- Professional AV technician

Podium: Microphone II

In addition to the microphone Dr. Tynan will bring with him, he will need a separate microphone provided by the sponsor at the podium. He prefers a wireless microphone attached to the podium/lectern (detachable should he wish to walk around). Important note: Along with the podium microphone, the sponsor must provide a microphone stand center stage for Dr. Tynan's microphone (Neumann KMS 105).

AV / TECH RIDER

 **Lighting:** Dr. Tynan is 6'4" tall; please have good lighting on his face, but no spots. During the program, the stage area should be softly lit and the audience lighting dark, not black. The AV technician must have knowledge and access to all lighting available.

 **Special Request:** Please have available a variety of hard red apples (Fuji, Pink Lady, Envy, Cortland), bananas, and room temperature still bottled water. Dr. Tynan will need these items in advance of the sound check.

Summary of Required Backline Equipment:

- Screen large enough for audience to see video
- DVD projector
- Professional sound console with reverb, delay, and phantom feed to support live vocals performed to backing tracks
- 2 monitors
- Microphone stand
- Podium: adjustable preferred or built up to hand rest height of 46"
- Wireless, detachable microphone (preferred) for podium
- Reading light attached to podium
- Professional AV technician

Program Summary:

- DVD intro: Room dark, not black
- First Song (Ride On): Soft lighting, no spots
- Speech: Soft lighting, no spots
- Closing Song (Hallelujah): Soft lighting, no spots

The sponsor must supply all sound, lights and technical support. There is no substitution of backline equipment.
