

Dr. Katrina Firlík made history as the first woman admitted to the neurosurgery residency program at the University of Pittsburgh Medical Center, one of the largest and most prestigious programs in the country. She then spent six years as a neurosurgeon in private practice in Greenwich, Connecticut and served on the clinical faculty at Yale University School of Medicine. Katrina currently focuses on medical innovation as an entrepreneur. She is co-founder and chief medical officer of HealthPrize Technologies. HealthPrize has developed a novel solution to the problem of poor compliance with prescription medications, a problem that leads to poor outcomes and an estimated \$290 billion in preventable medical spending per year in the US.

Her first book, *Another Day in the Frontal Lobe*, draws on her rare combination of wit, humor, and medical insight to create a neurosurgeon's Kitchen Confidential - a unique insider's memoir of a fascinating profession. Dr. Firlík recounts how her background as a surgeon's daughter with a strong stomach and a keen interest in the brain led her to this rarefied specialty, and she describes her challenging, atypical trek from medical student to fully qualified surgeon.

Another Day in the Frontal Lobe was selected as part of the 78th Annual Exhibition of Books for the Teen Age at the New York Public Library. The Library Journal selected *Another Day in the Frontal Lobe* as one of their Best Sci-Tech Books of 2006, and it was also ranked as #3 on the Science Bestseller list in the August edition of *Discover Magazine*. *Another Day in the Frontal Lobe* has been published internationally in the UK, China, and Taiwan, with translations soon to arrive in Brazil and Korea.

Dr. Firlík has been interviewed numerous times on NPR and has...
